

DURACLAD

Suitable for all areas

Areas such as kitchens, treatment cubicles, corridors and shower rooms all benefit from DURACLAD, especially when a wetroom zone is required. When creating a wetroom environment, we also recommend using Duraflor Safety Flooring. DURACLAD can be installed ‘floor to ceiling’ or just on the lower section of internal walls.

Product Specification

## Create an attractive environment

DURACLAD comes in a wide selection of colours including light pastels and brighter shades. Zones can be colour coded and a special antimicrobial coating can be applied if required (available for selected colours). Create a safe, hygienic and stylish environment that is also low maintenance. For care homes, hospitals, schools, health resorts, restaurants, food production and hotels.

# DURACLAD

## Hygienic and cost saving

DURACLAD is a durable and hygienic internal wall cladding used to prevent bacteria and mould growth. It is also suitable as an impact protection system against wheeled and pedestrian traffic.

The system provides superior hygiene benefits compared to other wall finishes, giving a seamless, hygienic and easy to clean surface.

A smart, attractive and cost effective solution for EDUCATION, HEALTHCARE and LEISURE establishments. With no grout lines to support bacterial growth, or to break down under a rigorous maintenance schedule, it can form part of any virus protection Risk Assessment Plan in all these organisations.
